

“With AgilePoint we quickly and securely implement supporting business processes – with deep integration of existing IT Systems.

- GRENKELEASING AG

Situation

For supportive business processes, GRENKE was looking for a system that would enable fast and secure requirements implementation, even in an insecure/changing requirement environment with deep integration into existing systems

Significant benefits are gained by allowing process owners to map workflows with a manageable effort and without deep programming skills, without sacrificing performance, scalability and other requirements such as reliability, backups and user rights. For the modeler, “implementations” - from simple requirements to complex solutions - always felt the same.

Usage

There are no media breaks or technology changes. Thanks to AgilePoint’s iterative project implementation approach, GRENKE can make dynamic changes to workflow models as needed. This also works reliably with running workflows, which opens up great optimization potentials with a small technological outlay. AgilePoint brings a wealth of standard features by default - available as Shapes / Modeling Constructs / e-Form controls. This enables integration of existing systems such as databases, MS SharePoint, MS Office, Web Services and much more. Thus, GRENKE creates applications efficiently and quickly in the sense of a “composite application”. GRENKE currently uses AgilePoint in conjunction with the latest versions of Microsoft SharePoint and Microsoft Office. User interfaces use AgilePoint e-Forms, and Microsoft ASP.NET.

Thanks to the clear architecture of the underlying AgilePoint framework, the GRENKE IT department internally quickly and efficiently developed its own extensions for AgilePoint to implement special requirements such as the integration of AgilePoint into an internal application (which had no default interfaces). Deploying, running and maintain an AgilePoint solution is easy.

Conclusion

With AgilePoint, GRENKE quickly and securely implements supportive business processes with deep integration into existing IT systems - even in an insecure requirement environment. The AgilePoint approach convinces both methodically and technically.

GRENKE®

About GRENKE®

The core business of the GRENKE Group is leasing for office communication. The focus is on the efficient execution of many small and smallest contracts, coupled with personal advice and competent support. The business units “Bank” and “Factoring” complement the portfolio of the financial services provider. GRENKELEASING AG is listed in the SDAX.

About AgilePoint

AgilePoint is respected worldwide in the industry of low code and process-centric application design. We offer an innovative low-to-non-code development platform for Digital Process Automation, which can easily integrate with any 3rd party systems. Our platform allows both the technical as the business users to implement and deploy business apps into digital processes across multiple environments and cloud platforms without needing to write any code.
